EXPERIMENT 1

Bank Loan Application Reports Suite — Report Types Use Case

Name: Jobeson J | **Register Number:** 240701217
Subject: Low Code Application Development using Zoho Creator
Project: Bank Loan Application & Pre-Screening Management

Aim

To build a suite of nine reports on Loan_Application_Form, one for each report type available in Zoho Creator (List, Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot Table, Chart and Summary), so that each group of bank staff has a view suited to its decisions.

Introduction

A single default list cannot serve everyone. Loan officers need to edit statuses in bulk, the callback team needs a day-by-day view, the credit team wants to see where applicants live, and management wants totals and charts. Zoho Creator lets many reports sit on the same form, each presenting the same records in a different way. Choosing the report type from the reader's need, instead of defaulting to a list, is the skill this experiment practises.

Procedure

1. Open the Loan Application & Pre-Screening Management application and make sure Loan_Application_Form has the fields used by the reports (Application_Status, Document_Verification_Status, Credit_Check_Status, Approval_Status and Application_Submitted_On, in addition to the fields of Experiments 4 and 5).
2. Click **Create → Report** and choose the form Loan_Application_Form.
3. For each report in Table 1.1, select the matching report type, name the report and set the grouping, sorting and columns shown in the table.
4. Apply the configuration rules of Table 1.2 (sorting, edit permissions, default filters, number formats).
5. Add at least three sample applications so that every report has data.
6. Open each report in Access mode and try one interaction (drag a Kanban card, click a calendar date, filter the list).
7. Capture a screenshot of each report and of the report-type selector.

Report Types Used and Their Mapping

Table 1.1: Nine report types and their configuration

Type	Report name	Used by	Key configuration
List	All_Loan_Applications_List	Loan officers	Columns: name, loan type, income, employment type, status; sorted by Application_Submitted_On descending
Spreadsheet	Loan_Applications_Spreadsheet	Loan officers	Inline-editable status columns; grouped by Loan_Type
Kanban	Loan_Status_Kanban	Loan officers	Grouped by status: Submitted, Document Verification, Credit Check, Approved, Disbursed, Rejected
Calendar	Callback_Schedule_Calendar	Callback team	Based on Preferred_Callback_Time (mapped to a date); day cell shows number of callbacks
Map	Applicant_Residential_Map	Credit team	Based on Residential_Address (geocoded); pins coloured by Loan_Type
Timeline	Application_Activity_Timeline	Branch management	Based on Application_Submitted_On; grouped by week
Pivot Table	LoanType_By_EmploymentType_Pivot	Branch manager	Rows: Loan_Type; Columns: Employment_Type; Values: count of applications
Chart	LoanType_Distribution_Chart	Management meetings	Pie chart; segments by Loan_Type; values = count
Summary	LoanType_Amount_Summary	Finance	Grouped by Loan_Type; count, sum and average of Monthly_Income

Configuration Rules

Table 1.2: Report-wise rules

Report	Rule
List	Default sort by submission time, newest first; search bar and filters on loan type, employment type and status
Spreadsheet	Only the three status columns are editable; edit permission restricted to the Loan Officer role
Kanban	Moving a card updates the Status field and records a time stamp
Calendar	Only the current week is shown by default
Map	Residential_Address must be geocode-enabled for accurate pins
Timeline	Data refreshes daily
Pivot Table	Blank cells displayed as zero
Chart	Refreshes automatically when a new application is submitted
Summary	Totals formatted in INR with two decimal places

Choosing a Report Type

- **Row-level work** (find, read, edit): List and Spreadsheet.
- **Process tracking**: Kanban, which turns a status field into a visual pipeline.
- **Time and place**: Calendar, Timeline and Map use a date or an address as the organising axis.
- **Analysis**: Pivot Table, Chart and Summary aggregate many rows into a few numbers.

Result

Nine reports, one for each Zoho Creator report type, were created on Loan_Application_Form and configured with the listed grouping, sorting and permissions.

Conclusion

The same records can be read as a list, edited as a grid, moved through a pipeline, placed on a calendar or map, tracked over time, cross-tabulated, charted and summarised. Selecting the report type from the stakeholder’s question gives each group a faster route to its decision than one default list.
