EXPERIMENT 4

Bank Loan Application Form — Basic Fields Use Case in Zoho Creator

Name: Jobeson J | **Register Number:** 240701217
Subject: Low Code Application Development using Zoho Creator
Project: Bank Loan Application & Pre-Screening Management

Aim

To design and build the “Loan Application & Pre-Screening Management” application in Zoho Creator, using all thirteen Basic Fields of the Form Builder in a single Loan_Application_Form, and to generate a Loan_Application_Report that lets loan officers filter, pre-screen and route applications for document verification.

Introduction

A bank branch that accepts loan applications on paper receives illegible handwriting, incomplete income details and no early check before the applicant is called in. A structured online form removes these problems: every field has a type, a rule and a place, so each application arrives as a clean digital record.

Zoho Creator’s Form Builder offers thirteen Basic Fields (Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select and Checkbox). Choosing the right type for each piece of data is the first design decision in any low-code application, because the field type decides the input control, the built-in validation and the way the value can later be filtered or summarised in reports.

Application Used

Table 4.1: Application summary

Item	Details
Application name	Loan Application & Pre-Screening Management
Form	Loan_Application_Form
Report	Loan_Application_Report (generated automatically)
Primary users	Prospective borrowers, bank loan officers
Platform	Zoho Creator (Form Builder, Report Builder, Deluge workflow)

Procedure

1. Log in to Zoho Creator and create a new application named **Loan Application & Pre-Screening Management**.
2. Open the Form Builder and create a form named **Loan_Application_Form**. Zoho Creator generates the linked report **Loan_Application_Report** automatically.
3. Add four sections (headings) to the canvas: Personal Details, Contact Details, Income & Employment Details, and Loan Details & Consent.
4. Expand the Basic Fields palette and drag all thirteen fields into their sections. Rename each field using the link names listed in Table 4.2.
5. Open Field Properties for each field and apply the validation rules in Table 4.4.
6. Open the form in Access mode, submit the three test records of Table 4.5, and confirm that each appears in Loan_Application_Report.

7 Add a Form Workflow (On Add → On Success) that sends an acknowledgement email to the address captured in Email_Address.

8 In the report, filter by Loan_Type and Monthly_Income to confirm that a loan officer can pre-screen the list.

Basic Fields Used and Their Mapping

Table 4.2: Mapping of the thirteen Basic Fields (sample values taken from the assignment specification)

Basic Field	Field name	Purpose	Sample value
Name	Applicant_Name	Full name with First/Last sub-fields	Suresh Raghavan
Email	Email_Address	Validated address for status updates	suresh.raghavan@example.com
Address	Residential_Address	Residential address with city, state, pincode	18, Lake View Road, Trichy, TN 620001
Phone	Contact_Number	Mobile number for the verification call	+91 94430 22110
Single Line	PAN_Number	Short free-text entry for the PAN	ABCDE1234F
Multi Line	Purpose_Of_Loan	Free-text description of the intended use	Home renovation and furniture purchase
Number	Monthly_Income	Gross monthly income	55000
Date	Date_Of_Birth	Date picker used for the age check	22-Jan-1990
Time	Preferred_Callback_Time	Slot for the loan officer’s callback	5:00 PM
Drop Down	Loan_Type	Single choice of loan product	Home Loan
Radio	Employment_Type	One mandatory choice: Salaried / Self-Employed	Salaried
Multi Select	Existing_Liabilities	One or more current commitments	Car Loan, Credit Card Dues
Checkbox	Consent_For_Credit_Check	Consent for a credit bureau check	Checked

Form Layout (Section-wise)

Table 4.3: Sections of Loan_Application_Form

Section	Fields
A — Personal Details	Applicant_Name, Date_Of_Birth, PAN_Number
B — Contact Details	Email_Address, Contact_Number, Residential_Address
C — Income & Employment	Employment_Type, Monthly_Income, Existing_Liabilities
D — Loan Details & Consent	Loan_Type, Purpose_Of_Loan, Preferred_Callback_Time, Consent_For_Credit_Check

Validation Rules Configured

Table 4.4: Validation rules

Rule	Field(s)	Configuration in Field Properties
Mandatory	Applicant_Name, Contact_Number, Date_Of_Birth, Employment_Type, Loan_Type, Monthly_Income, Consent_For_Credit_Check	“Mandatory” switched on
Email format	Email_Address	Built-in email format validation enabled
Phone format	Contact_Number	Country-code format enabled for Indian numbers
Minimum value	Monthly_Income	Value must be greater than 0
Minimum age	Date_Of_Birth	Applicant must be at least 18 years old (on-validate check, see below)
Consent	Consent_For_Credit_Check	Form cannot be submitted unless checked (mandatory checkbox)

The 18-year rule is not a single property toggle in the Date field, so it is enforced with a short on-validate script that blocks submission:

```
if (input.Date_Of_Birth != null && input.Date_Of_Birth.addYear(18) > zoho.currentdate)
{
    alert "Applicant must be at least 18 years old.";
    cancel submit;
}
```

Code 4.1 — Minimum-age check (Form Workflow, On Validate)

Test Records

Three fictitious records are prepared for the experiment. Record 1 uses the sample values from the assignment; Records 2 and 3 are test data created for this record.

Table 4.5: Test records to be submitted

#	Applicant	Date of birth	Employment	Monthly income	Loan type	Existing liabilities	Callback
1	Suresh Raghavan	22-Jan-1990	Salaried	55000	Home Loan	Car Loan, Credit Card Dues	5:00 PM
2	Priya Natarajan	14-Aug-1993	Self-Employed	72000	Personal Loan	None	11:30 AM
3	Karthik Subramanian	03-Mar-1986	Salaried	98000	Vehicle Loan	Home Loan	3:15 PM

Output

SCREENSHOT TO ATTACH

Form Builder showing Loan_Application_Form with all thirteen Basic Fields placed in the four sections

Fig 4.1 — Loan_Application_Form in the Form Builder

SCREENSHOT TO ATTACH

Live preview (Access mode) of the filled Loan_Application_Form

Fig 4.2 — Live preview of the form

SCREENSHOT TO ATTACH

Loan_Application_Report showing the three submitted test records

SCREENSHOT TO ATTACH

Acknowledgement email received after submission, and the report filtered by Loan_Type

Fig 4.4 — Acknowledgement email and filtered report

Workflow Summary

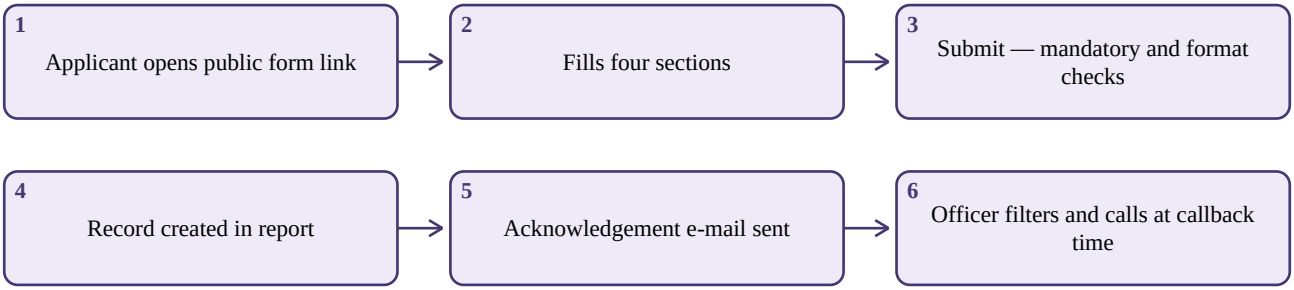

Fig 4.5 — Basic-field submission workflow (schematic drawn from the specification; not a screenshot)

Result

The Loan_Application_Form was built with all thirteen Basic Fields, configured with the listed validations, and linked to an automatically generated Loan_Application_Report from which loan officers can filter and pre-screen applications.

Conclusion

Each Basic Field type maps to a distinct kind of banking data: identity (Name, Date), contact (Email, Phone, Address), income (Number, Radio, Multi Select), loan requirement (Drop Down, Multi Line) and consent (Checkbox). Choosing the field type correctly gives the bank validation and filtering without writing code, and the one rule that needed script (minimum age) shows where low-code hands over to Deluge.
