EXPERIMENT 9

Bank Loan Application Command Center — Page Builder Elements

Name: Jobeson J | **Register Number:** 240701217
Subject: Low Code Application Development using Zoho Creator
Project: Bank Loan Application & Pre-Screening Management

Aim

To build one internal page, Loan_Command_Center_Page, that uses all eleven Page Builder elements (Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets and Viewer) so that loan officers and branch management can monitor and manage loan applications from a single screen.

Introduction

Reports show records; a Page composes a workspace. In the Page Builder, elements are placed on a canvas and connected to forms, reports and actions, so that one screen can show live figures, accept new data, let staff move applications between stages, and display reference material. For a loan branch this removes the switching between the report, e-mail attachments and physical files that slows each application down.

Procedure

1. Open Loan Application & Pre-Screening Management and select **Create → Page**; name it **Loan_Command_Center_Page**.
2. Drag a **Panel** onto the canvas and make it the outer container for the page.
3. Inside the panel, add the Gauge, Chart and Search elements as the top strip.
4. Add the Button and the Board in the centre; map each Board column to a value of the Status field.
5. Add the Report element below the Board, and the Widgets element as the bottom strip.
6. In the sidebar add the Snippets element, the Viewer, and the Form element (as an expandable tab).
7. Apply the configuration rules of Table 9.3; then publish the page and test each element with sample data.
8. Demonstrate a Board drag-and-drop and the Viewer displaying a sample income-proof document.

Page Elements Used and Their Mapping

Table 9.1: Eleven Page Builder elements

Element	Element name	Purpose	Placement
Panel	Command_Center_Main_Panel	Outer container that groups all elements	Wraps the whole page
Board	Loan_Status_Board	Kanban-style board to move applications between stages	Centre; columns Submitted, Document Verification, Credit Check, Approved, Disbursed, Rejected
Chart	LoanType_Distribution_Chart_Widget	Live application count per loan type (pie)	Top right, next to the gauge
Gauge	Monthly_Disbursal_Target_Gauge	Progress towards the monthly disbursal target	Top left
Search	Applicant_Search_Bar	Find an applicant by name, application ID or contact number	Top, above the board
Form	Quick_Counter_Loan_Intake_Form	Log a walk-in applicant using Loan_Application_Form	Right panel, expandable tab
Report	Full_Loan_Applications_Report	Embedded Loan_Application_Report for row-level review and export	Lower section
Snippets	Loan_Terms_Eligibility_Snippet	Reusable terms and eligibility text	Sidebar
Button	Send_Document_Reminder_Button	One-click reminder e-mails for missing documents	Above the board
Widgets	OfficerAvailability_And_InterestRate_Widgets	Officer availability and interest-rate slabs	Bottom strip
Viewer	KYC_Income_Document_Viewer	Inline viewer for uploaded KYC/income proof	Sidebar, below the snippet

Page Layout (Section-wise)

Table 9.2: Sections of the page

Section	Elements
1 — Overview strip	Gauge, Chart, Search
2 — Processing workspace	Button, Board
3 — Detailed data	Report
4 — Reference and quick actions (sidebar)	Snippets, Viewer, Form
5 — Operations strip	Widgets

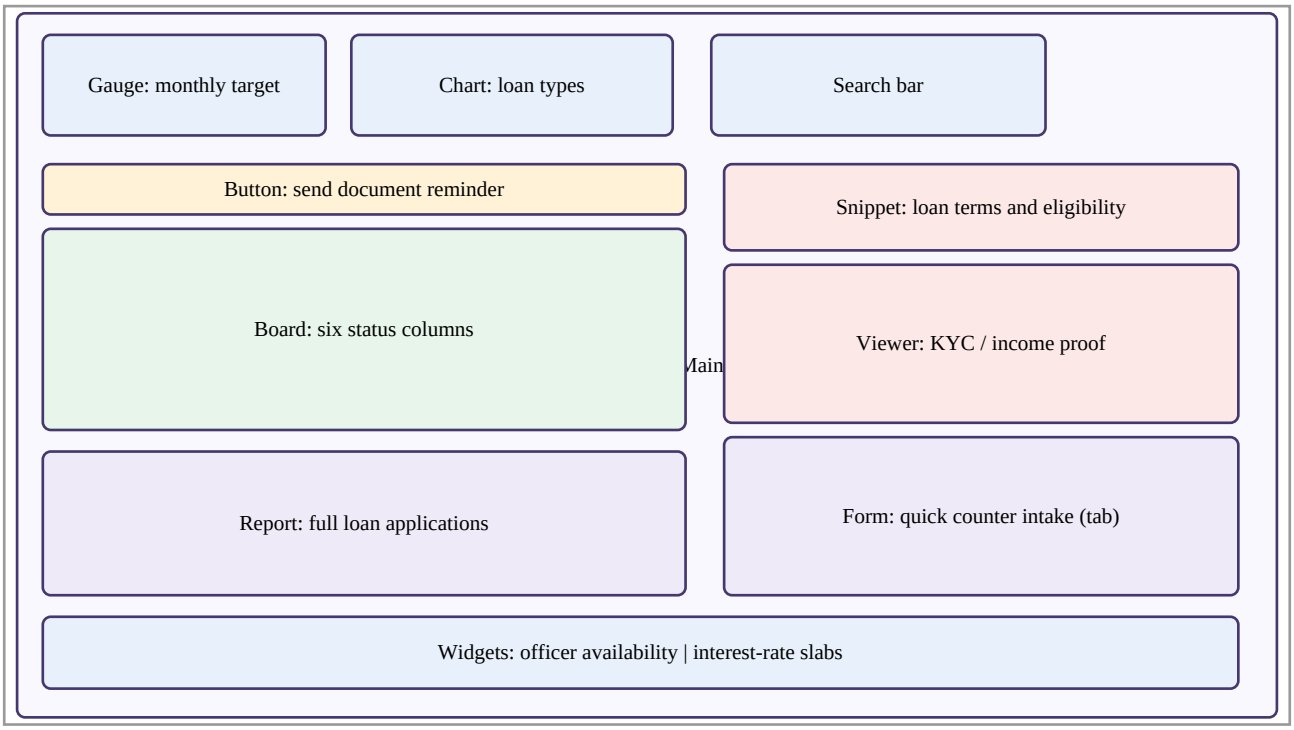

Fig 9.1 — Layout of Loan_Command_Center_Page (wireframe drawn from the specification; not a screenshot)

Configuration and Access Rules

Table 9.3: Element-wise rules

Element	Rule
Panel	Visible only to loan-officer and branch-manager roles
Board	Each column mapped to a Status value; dragging a card updates the record
Chart	Auto-refresh at a fixed interval
Gauge	Monthly target is configurable; colour changes as disbursals approach the target
Search	Searches applicant name, application ID and contact number together
Form	Same validation rules as the standard Loan_Application_Form
Report	Export to Excel limited to branch-manager accounts
Snippets	Edited centrally; changes show everywhere the snippet is used
Button	Triggers a workflow that mails only applicants with missing documents
Widgets	Availability refreshes in real time; interest rates come from the published rate card
Viewer	Shows the latest uploaded document without a manual link update

Output

SCREENSHOT TO ATTACH

Loan_Command_Center_Page open in the Page Builder with all eleven elements labelled

Fig 9.2 — Page in the Page Builder

SCREENSHOT TO ATTACH

Gauge and Chart elements showing live sample data

Fig 9.3 — Gauge and Chart with live data

SCREENSHOT TO ATTACH

Board before and after dragging an application card between columns

Fig 9.4 — Board drag-and-drop (before / after)

SCREENSHOT TO ATTACH

KYC_Income_Document_Viewer displaying a sample income-proof document

Fig 9.5 — Viewer showing a sample document

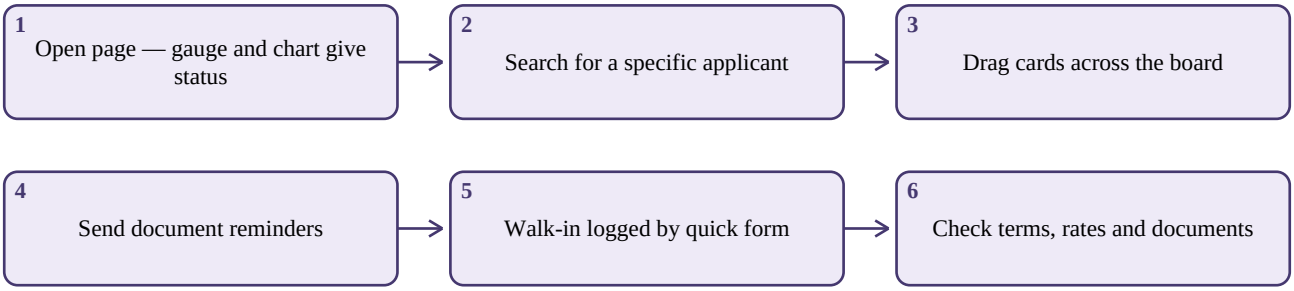

Fig 9.6 — Daily use of the command center (schematic drawn from the specification; not a screenshot)

Result

Loan_Command_Center_Page was built as a single Panel containing the Gauge, Chart, Search, Button, Board, Report, Snippets, Viewer, Form and Widgets elements, with the access and refresh rules listed above.

Conclusion

A Page turns separate forms and reports into one working screen. Monitoring elements (Gauge, Chart, Board), look-up elements (Search, Report, Viewer), action elements (Button, Form) and reference elements (Snippets, Widgets) together let an officer handle an application from first call to approval without leaving the page.
